To whom it may concern;

I'm waiting to see the scientific numbers that prove why we need to have nutrient removal. I hear "its just the right thing to do" but no scientific data has been provided. I have seen numbers that state that the problem is with storm water and the leaves etc.. I am for keeping our water clean and will be totally supportive as soon as the numbers from good scientific studies are provided. Scare tactics about the EPA do not make a good reason to do it.

The cost to do tier II is way to cost prohibited with no proof of the environmental gain. The "just the right thing to do" is not in the 40 CFR's as a reason to create a new limit.

If the data , good scientific data is provided I'll be the States greatest supporter.
