FACILITY LOCATION:	50 West 100 North, Coalville, UT

BACKGROUND

Coalville leases the land that the existing Coalville City Wastewater Treatment Plant was constructed on from the United States Bureau of Reclamation (USBOR). The 50 year lease expires in 2014 and the USBOR has elected to not renew the lease. Therefore, Coalville City purchased land to construct a new wastewater treatment facility to serve the community. This new facility is named the Coalville City Wastewater Treatment Facility (CWWTF) and will be constructed approximately ½ mile to the south of the existing treatment plant. It is anticipated that the plant will be operational October 2014.

The CWWTF treatment process consists of screening and grit removal, two parallel Modified Luzack-Ettinger (MLE) process trains, two secondary clarifiers and UV disinfection prior to discharge to an unnamed tributary to Chalk Creek. The facility has a maximum monthly design flow of 0.58 MGD with an average daily flow rate of 0.32 MGD. The outfall location will be located at latitude 40° 55' 13" and longitude of 111° 24'09".
