BACKGROUND

Lake Side Power Plant (LSPP) is located in Vineyard, Utah. The LSPP was completed in 2007 and started discharging in August 2007. The facility has an electric output capacity of 565 MW. The facility utilizes 2 gas-fired combustion turbines with 2 heat recovery steam generators and a steam turbine operating in a combined-cycle mode. They utilize ground water in the cooling cycle and discharge it to Lindon Hollow Creek. During a review of the permit and WLA, some discrepancies were found in the intermediate thermal limits which have been corrected. The correction requires a modification of the permit and public notice of the changes being mad. No other limits or conditions are being modified.
