Equipment Information

1. Provide diagram of internal components:
2. Manufacturer: ______________________
   Model no.: ______________________
3. Combustion chamber dimensions:
   Length: __________ inches,
   Cross-sectional area: __________ square inches
4. Burners per afterburner: ______ at ______ BTU/hr each
5. Minimum operating temperature of combustion chamber: ______ °F
6. Minimum retention time (seconds):
7. Heat exchanger used: □ No □ Yes:
   Describe heat exchanger:
8. Catalyst used: □ No □ Yes:
   Describe catalyst:
9. Stack dimensions: Height ________ Diameter ________

Waste Gases (At Maximum Continuous Production Rate)

10. Chemical composition

11. Afterburner exhaust temperature: _______ °F
    Flow rate: ______ scfm

Auxiliary Fuel

12. Type: □ Natural gas □ Fuel oil □ Used oil* □ Coal □ Diesel □ Other: ______________________

13. Maximum sulfur content: ________ % by Wt

14. Fuel usage rate at maximum continuous production rate:

Average Operation of Source

15. Gas flow rate: scfm
16. Efficiency of afterburner: %

Maximum Operation of Source

17. Gas flow rate: scfm
18. Efficiency of afterburner: %

Emissions Calculations (PTE)

19. Calculated emissions for this device
   \[ \text{PM}_{10} \quad \text{Lbs/hr} \quad \text{Tons/yr} \quad \text{PM}_{2.5} \quad \text{Lbs/hr} \quad \text{Tons/yr} \]
   \[ \text{NO}_x \quad \text{Lbs/hr} \quad \text{Tons/yr} \quad \text{SO}_x \quad \text{Lbs/hr} \quad \text{Tons/yr} \]
   \[ \text{CO} \quad \text{Lbs/hr} \quad \text{Tons/yr} \quad \text{VOC} \quad \text{Lbs/hr} \quad \text{Tons/yr} \]
   \[ \text{CO}_2 \quad \text{Tons/yr} \quad \text{CH}_4 \quad \text{Tons/yr} \]
   \[ \text{N}_2\text{O} \quad \text{Tons/yr} \]
   \[ \text{HAPs} \quad \text{Lb/whr} \quad \text{speciate} \quad \text{Tons/yr} \quad \text{speciate} \]

Submit calculations as an appendix. If other pollutants are emitted, include the emissions in the appendix.
Instructions - Form 3 Afterburners

NOTE: 1. **Submit this form in conjunction with Form 1 and Form 2.**

2. Call the Division of Air Quality (DAQ) at (801) 536-4000 if you have problems or questions when completing this form. Ask for a New Source Review Section engineer. We will be glad to help!

* For used oil see #12 of the instructions below.

1. Supply an assembly drawing, dimensioned and to scale of the interior dimensions and features of the equipment.
2. Specify the manufacturer, model number and serial number of the equipment.
3. Specify the dimensions of the combustion chamber.
4. Indicate the number of burners per afterburner and the BTU/hr for each burner.
5. Indicate the minimum operating temperature for the combustion chamber.
6. Supply the minimum retention time in the combustion chamber.
7. Indicate whether or not a heat exchanger is used and describe that equipment.
8. Indicate whether or not a catalyst is used in the process and describe it.
9. Supply the stack dimensions.
10. Supply the chemical composition of the waste gases at maximum production rate.
11. Specify the exhaust temperature and flow rate of the waste gases enter the afterburner.
12. Indicate what type of fuel in addition to the waste gases that is used. Used oil is any oil that has been refined from crude oil, used, and, as a result is contaminated with impurities. The concentration/parameters of contaminants in any used oil fuel cannot exceed the following levels:

   1. Arsenic .................................................. 5 ppm by weight
   2. Cadmium ............................................... 2 ppm by weight
   3. Chromium ........................................... 10 ppm by weight
   4. Lead .................................................. 100 ppm by weight
   5. Total halogens ..................................... 1,000 ppm by weight
   6. Sulfur .................................................. 0.5 percent by weight
   7. Flash Point ......................................... 100°F

13. Indicate the sulfur content of the fuel in percentage by weight.
14. Supply how much of this fuel will be used at maximum continuous production.
15. Indicate the average gas flow rate through the afterburner during average operation.
16. Indicate the average efficiency of the afterburner during average operation.
17. Indicate the maximum gas flow rate through the afterburner during maximum operation.
18. Indicate the maximum efficiency of the afterburner during maximum operation.
19. Supply calculations for all criteria pollutants and HAPs. Use Manufacturers’ data or AP-42 to complete your calculations.
